**INTRODUCTION**

Gastrulation involves:

- Fragmentation of cells
- Forms an inner cell layer termed - hypoblast - endoderm
- Food + surface layer, ectoblast, composed - ectoderm, mesoderm, mesoblast and - endoderm.
- White, vacuolation begins - posterior region - blastoderm - extends progressively - anteriorly.
- Phi - anterior region - endoderm cells not yet formed a definite layer but appear - representing diff. surface layer as individual cells.
- Phi the endoderm - blast - zone fills - along the posterior-anterior axis - blastoderm.
- Phi then follows - broken layer and in - anterior half, the endoderm - represented by scattered cells.

**MORPHOGENETIC MOVEMENTS**

**Ingression** The sinking of a layer of cells into the interior of a cell cluster but still in contact with the surface.

**Invagination** The sinking of a layer of cells into the interior of a cell cluster but still in contact with the surface.

**Immigration** The sinking of a layer of cells into the interior of a cell cluster but still in contact with the surface.

**Emigration** The sinking of a layer of cells into the interior of a cell cluster but still in contact with the surface.
